PREFACE

This publication was prepared by the Research and Development Section of the Colorado Division of Employment and Training, in cooperation with the Employment and Training Administration, U. S. Department of Labor. It is one of several reports published periodically and provides historical, current, and projected labor market information, including the outlook for the Colorado economy, as well as population and labor force estimates, industry and occupational employment outlook, and an analysis of job openings received and services to registered applicants in Colorado Job Service Centers.

It is hoped that this information will be of value to officials and persons with responsibilities for the development and implementation of employment and job-training programs.

Comments, suggestions, and questions regarding content and format are invited and may be addressed to:

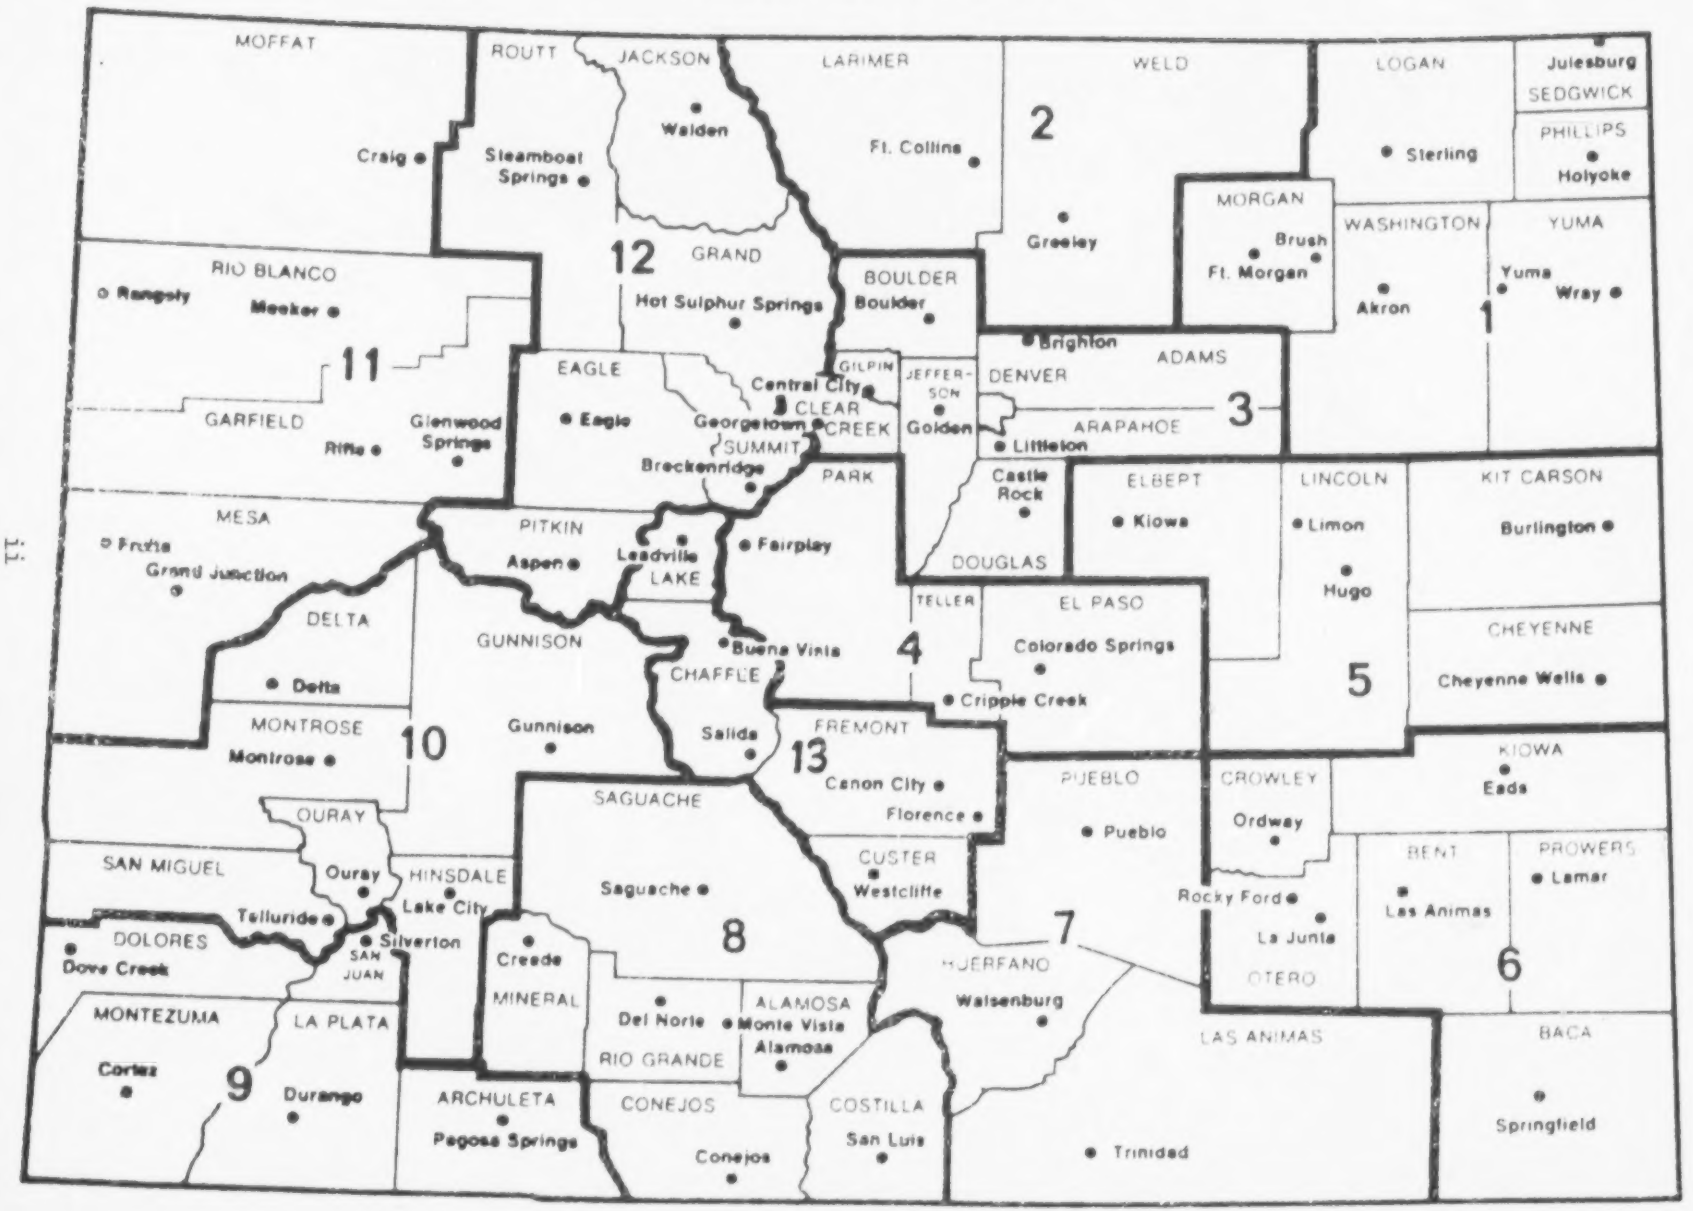
COLORADO PLANNING REGIONS



HIGHLIGHTS OF THE COLORADO ECONOMY
FY 1983

• Population growth will remain moderate; projected population of 3,050,500 will be comprised of 50% females, with minorities increasing by 5% over fiscal year 1982 or approximately 23% of total population.

• Per capita income ($10053) is approximately 5.7 percent greater than the United States average. The median income for a four person family in Colorado is estimated at $25,228, exceeding the national average by 12.7%.

• The March 1982 Consumer Price Index for the Denver-Boulder area was 309.2, a 9.9% increase over March 1981. The March 1982 United States index was 283.1, posting a 6.8% increase over the previous year.

• The estimated labor force of 1,542,100 indicates a participation rate of 66.9% for FY 1983. An unemployment rate of 5.7% indicates that moderate changes are expected in both employment and unemployment during FY 1983.

• Generation of new job opportunities will be influenced by national economic developments relative to interest rates, inflation, and budgetary emphases. A moderate 2.3% growth rate in private non-agricultural wage and salary employment is anticipated, with mining leading all industry sectors.

• Professional-technical, clerical, services and structural work occupational skills will dominate the occupational demands in Colorado.

• Approximately 320,317 applicants were available for services from Colorado Division of Employment and Training (CDET) during FY 1981. There was an approximate 8% increase in new and renewed applicants. Testing services increased slightly. All other services posted slight decreases in FY 1981 as compared to FY 1980.

• Services to special worker groups were positive and improved over previous years, except for females. Improvements in placement and the level of wages at which females are placed must be improved considerably if equity of services is to be achieved for this special class of workers.

• Recommendations for improved services at local Job Service Centers are increased job development, increased outreach, increased file search, and increased job openings through broader penetration of employers.

PROFILE OF COLORADO

The 104,247 square miles that comprise the state of Colorado are divided by the Rocky Mountains, approximately one-third is west of and two-thirds are east of the Continental Divide.

Much of the waterfall flows westerly and away from the densely-populated Eastern Slope.

The eastern plains are reasonably fertile and have been developed for irrigated crop and pasture land. The Arkansas River Valley and the South Platte River Valley comprise the major irrigated land areas. Weld County is one of the most highly-developed and productive agricultural counties in Colorado.

Mineral resources in the eastern half of the state include outcroppings of sandstone, limestone, and siltstone, and subsurface resources include oil, gas, and coal. Construction gravel is mined in many areas.

The high mountain valleys and basins are developed for pasture, hay, grains, fruit, and vegetable crops. The area running southeast from Mesa County produces major quantities of high-quality peaches, pears, and apples. The San Luis Valley in the south central portion of the state is a major producer of potatoes and other truck-garden crops.

Mineral resources are available in the western half of the state; oil, coal, molybdenum, and uranium are the major minerals that are produced.

The state is composed of thirteen planning regions, each region being defined as a homogeneous geographic area sharing common physical, economic, and sociological problems, resources, and goals.

PLANNING REGIONS

The eastern plains, comprised of Regions 1, 5, and 6, represent less than five percent of the state's population in 1980. Region 6, the extreme southeastern portion of the state, experi-

enced a 4.7% decrease in population during the period 1970 to 1980. Region 1 grew by 6.3% and Region 5 by 13.6%, as compared to the state growth of 30.2% during that decade. Population growth for these areas will continue to be slow, and perhaps will show even more of a loss during the 1980's, with the exception of western Elbert County in Region 5. This area is approximately 35 to 45 miles from metropolitan Denver and therefore attracts commuters; it is the only county in these three planning regions whose population grew (from 1,402 in 1970 to 2,715 in 1980) during the past decade. It can be expected that this growth will continue during the early 1980's.

Agriculture continues to be one of the major industries in these counties, comprising approximately 20% of the employment. Trade and government are the second and third largest industry employment sectors in these regions.

Per capita income for Region 1 in 1980 was $9,240, $8,067 in Region 5, and $7,785 in Region 6. The state average was $10,053.

Region 2 (the northern Front Range) comprises two fast-growing areas, Larimer and Weld Counties. This area increased its population from 1970 to 1980 by approximately 93,000 or 52%, as compared with the state increase of 30.2%. As stated above, Weld County is the most highly-developed agricultural county in Colorado, but this region is also responsive to the growth of electronics manufacturing. Trade, manufacturing and government are the leading nonagricultural industry sectors in this region. Per capita income averaged $8,532 in 1980 and should continue to increase at a moderate pace.

Region 3 is comprised of metropolitan Denver. Approximately 64% of the state's nonagricultural employment occurs in this region. The region comprises 56% of the state's population. In 1980, the per capita income of $11,308 exceeded the state's average of $10,053. Trade, services, and government industry sectors record approximately 63% of the total nonagricultural employment in Region 3. Although the mining sector reflects the smallest number employed, this industry has been the fastest-growing in the metropolitan area. During the next five years, however, the services industry should replace mining as the fastest growing sector in the metropolitan area.

Region 4 is the Pike's Peak region. Population increased in this region at the same level as the state's, about 33% between 1970 and 1980. Nonagricultural employment growth also reflected the same rate as the state's. Government, trade, and services represent approximately 68% of total nonagricultural employment. Statewide, these three industry sectors represent approximately 64% of total employment. Per capita income for the region in 1980 was $8,436.

Region 7 (the Spanish Peaks area) posted a minimal population growth of 4.6% from 1970 to 1980. Pueblo city and county dominate the economic activity of this region, and that area gained only 7,500 people. The steel industry dominates the employment in this region, and area employment has grown at a slower pace than the state's. Per capita income in 1980 was approximately $8,160, well below the state average of $10,053. Economic growth in this region usually lags behind the state's and is expected to continue in that vein.

The southern mountain area consists of these planning regions:

Planning Region 8 - San Luis Valley
Planning Region 9 - San Juan Basin
Planning Region 13 - Upper Arkansas Valley

The San Luis Valley posted the lowest population gain from 1970 to 1980, only 208 persons. About 13% of the employment in this region is agricultural, consisting of farming of crops such as barley, alfalfa, wheat, potatoes, and cantaloupe. In addition, Mineral County produces silver, lead, and zinc. Government and trade are the two major nonfarm employers in this region.

Average per capita income is $6,999 for the region; however, Mineral County, the area producing lead, zinc, etc., posted a $10,313 per capita income in 1980. It is expected that this area will remain stable during the next few years, reflecting very little growth in employment and/or population.

The San Juan Basin (Region 9) increased its population by approximately 33% during the 1970-1980 decade. Tourism remains the major industry of this extreme southwest region. The industry sectors with the greatest employment are government, trade, and services. The 1980 per capita income for this region was approximately $7,300.

Region 13 (Upper Arkansas Valley) posted a population of 52,121 in 1980, reflecting a 25.6% increase from 1970 to 1980. This region is rich in energy resources ranging from strip-mined and subsurface coal to molybdenum, uranium, limestone, silver, lead, zinc, and copper. The average 1980 per capita income for this region approximated $8,060.

Population in Region 10 (the Black Canyon area) grew by 37% from 1970 to 1980. This growth can be attributed primarily to the region's major mineral resources of coal, uranium, and vanadium. Agriculture is responsible for approximately nine percent of total employment in this region. The leading nonfarm employment sectors are government, trade, and services. The per capita income in 1980 for this region was $6,831, well below the state average of $10,053. This may be partly attributed to the fact that Hinsdale and Ouray Counties have no significant natural resources or agriculture, and their per capita incomes are significantly lower than those in Delta, Gunnison, and Montrose Counties.

Due to the energy boom, Region 11 (the Plateau region) has experienced economic growth in the mining industry second only to the Denver region's. Coal mining (both strip and underground) and uranium and vanadium mining are the current primary energy resources in this region.

Between 1976 and 1978, mining employment grew by approximately 59%, juxtaposed with a 25% employment increase in total nonagricultural employment. Trade, services, and government are still the top industries, totaling more than 63% of nonfarm employment. Construction employment increased by approximately 59% between 1976 and 1978, reflecting the needs imposed on this region by the energy boom. It is expected that growth in this area will continue through FY 1983 at a healthier pace than in the state as a whole.

Per capita income in 1980 was $9,132 for this region and is expected to increase, along with population and employment in FY 1983. The population increase from 1970 to 1980 was approximately 53% or 42,826 persons.

Region 12 (northern mountain region) posted the greatest population growth from 1970 to 1980 in the state, 88% or 25,467 persons. Per capita income in 1980 was among the highest in the

state at $11,058. The greatest employment growth in this region has been due to the rapid expansion of coal mining in Jackson, Pitkin, and Routt Counties. In addition to the energy resources, this region is the most popular of all of Colorado's ski areas, as it includes Aspen, Steamboat Springs, Breckenridge, and Snowmass. If the snow falls, the ski industry in this region prospers.

POPULATION AND LABOR FORCE OUTLOOK, FY 1983

(Note: FY 1983 population estimates are based on the final updated 1980 Census data for Colorado and its 63 counties.)

During the 1960-1970 decade, the population of Colorado grew by approximately 25%; in the years between 1970 and 1980, growth accelerated to 30%, a much faster pace than the national rate of 10.8%. The rapid growth of the past twenty years was due to the fact that Colorado offered a very positive "quality of life" environment: excellent climate, recreational facilities such as skiing, fishing, and hunting; relatively moderate food and housing costs; and clean air. These factors attracted jobseekers as well as job producers.

Today, the Front Range, from Larimer and Weld Counties in the northeast to Pueblo County in the southeast, comprises approximately 80% of the state's population. Housing and food costs are among the highest in the country, and pollution problems are as bad or worse than in most large industrial cities. It is estimated that there will be 3,050,500 persons in Colorado in FY 1983; 77.2% will be white nonhispanic, 11.8% will be Hispanic, 3.5% black, 0.6% Indian/Eskimo, and 6.9% will be of other minorities and Pacific Islanders.

The driver's license immigration and emigration statistics are one measure of net immigration to Colorado. In 1978, net immigration peaked at 62,000; in 1979, net immigration decreased by 10,000, and in 1980, 41,460 immigrants, or another decrease of 10,000, were recorded. In 1981, 39,169 net immigration again recorded a slight decrease of 2,291.

Approximately 75.6% of the total population will be 16 years old and over in 1983, juxtaposed with 68.7% in 1970. This change in age distribution reflects the trend toward smaller families and later marriages, and the increasing number of males and females who are not marrying at all.

This large proportion of population 16 years old and over is reflected in our anticipated labor force of 1,542,100, with a participation rate of approximately 66.9%. In 1970, the participation rate was 56.9%. The current participation rate for the nation is approximately 63%.

The participation rate for females in Colorado in 1983 will approximate 60.8%. The 1970 participation rate for women was 38.1%. The male participation rate in 1970 was 72.1% and is estimated to be 73.1% in 1983.

Women 25 to 34 years old accounted for nearly half the increase in the number of female workers during the 1970's. A remarkable 64 percent of all women 25 to 34 were working or looking for work in 1979, and the first half of 1980, including 54 percent of the mothers in this age group who had to juggle the responsibilities of home and child care with those of a job. The pattern of a more continuous work history for women in these ages may widen their career and advancement opportunities in the 1980's.*

Nonagricultural wage and salary employment posted yearly average gains of about five percent from 1973 to 1979. 1981 growth averaged about 3.0%. It is expected that private nonfarm employment growth in Colorado for FY 1983 will post a moderate 2.3%. Unemployment will average about 5.7%. As in past decades, unemployment rates generally remained higher for women than men, with the gap widening when business was buoyant and declining during sluggish periods, such as the first half of 1980. Of the minority groups, blacks, both male and female, will experience the highest unemployment in the state, followed by Indian, Asian, and Hispanic females.

Occupational distribution for females, despite efforts to infiltrate nontraditional jobs, still finds most women in the health, teaching, clerical, service, and benchwork (assembly and repair) occupations. Males predominate in professional, technical, and managerial, crafts, and operative occupations.

Male-female earnings ratios vary considerably; women's earnings rarely approach parity with men's, even within the same major occupational groups. Significant change in the earnings gap is not expected during FY 1983, but it is hoped that, during the decade of the eighties, the female's share of 65% of men's wages will approach the eighty and ninety percentile.

*USDOL, BLS, October 1980, Bulletin 2080
Perspectives on Working Women: A Data Book

By the late 1970's, men's and women's educational attainment was the same, although their fields of training remained traditional.

In summary, FY 1983 will post modest growth in population and labor force. Inflation will moderate somewhat, the earnings gap between males and females will show little improvement, and unemployment of minorities will still be higher than that of the white labor force.

INDUSTRY EMPLOYMENT OUTLOOK
MAJOR DIVISION ANALYSIS*

During the past two years, new job opportunities in the private sector of the Colorado economy have been growing at about half the rate that would normally be expected. This experience has been equally true for the national economy as well. In terms of our local economy, the comparisons look something like this:

Ind. Division	Av. Growth Rate 1973-1979	Av. Growth Rate 1980 & 1981
Mining	13.1%	18.5%
Construction	2.1	- 4.3
Manufacturing	4.1	1.2
Transp. & Pub. Utilities	4.4	3.0
Wholesale Trade	4.7	3.9
Retail Trade	5.0	1.0
Fin. In. & Real Estate	5.9	4.0
Service	7.0	5.7
Average All Sectors	5.0%	2.7%

Although agreement is certainly less than unanimous, a number of factors seem to stand out as major contributors to these declining growth rates (or accelerating rates as was the case for Mining). They would include:

1. Historically high interest rates
2. Extraordinarily high energy costs
3. A general tendency toward more competitive market structures
4. A relatively strong dollar
5. Historically high inflation rates

What effects these various factors have had on our growth rates during the past two years and their expected effects on these same rates during 1982 and 1983 defines the bases for the following forecasts.

The Mining Industry

As the above growth rates indicate, mining was the only major division that, over the past two years, experienced an acceleration in its employment growth rate. New job opportunities expanded from about a 2700 yearly average in the 1973-79 period to a 6000 average in 1980 and 1981. Almost all of the acceleration was concentrated in the oil and gas extraction sector and was primarily the result of significant higher oil prices coupled with a substantial deregulation of the pricing structure of this sector within the United States. The outlook for this industry during the next two years, however, is somewhat less positive than the experience of the past two years.

Conservation efforts by business and households involving their consumption of electricity, softening crude oil prices, accelerating transportation costs, and environmental constraints are expected to reduce

the demand for labor in the coal mining sector of our economy over the short term.

The metals portion of the mining industry has been depressed for a number of months. The primary factors causing the down-turn--steel imports, soft steel demand, and environmental, political and cost constraints involving the nuclear powered electrical generating industry--are expected to keep this sector depressed at least through 1983.

A doubling of crude oil prices on the world market in 1979, coupled with the deregulation of oil prices in the United States brought on a surge of oil (and to a lesser extent natural gas) exploration activity during the 1980-81 period. New jobs in oil and gas extraction rose from a 1973-79 annual average of about 1300 to some 3500 in 1980 and an estimated 6000 in 1981. On a relative basis, growth rates increased from 10% to 24% to 35% on an annual basis.

Significant changes are currently taking place in the demand for and the price of petroleum. Conservation efforts, substitutions, and two recessionary experiences in the past 27 months, have dropped the daily consumption of oil in the United States from 19 million barrels in 1978 to less than 16 million barrels currently. Concomitant with this reduced level of consumption has been a stabilization of oil prices and more recently actual price reductions. Changes of this magnitude in the price of and the demand for the oil component of this sector are expected to reduce new job growth to 3000 in fiscal 1982 and about 2000 in fiscal 1983.

Given the above assumptions, industry-wide employment is forecast to increase by 1600 jobs during the current fiscal year (a growth rate of 3.9%) and 1300 new jobs in fiscal 1983 (3.0%).

The Construction Industry

High housing prices, high interest rates, and the flight of actual and potential residential mortgage funds into short-term investment instruments have kept the Colorado construction industry in a depressed state for the past two years. Some 2000 construction jobs were lost in 1980, and an estimated 3800 more in 1981. Without the antithetical movements in the non-residential sector, and to a lesser extent the oil shale development sector, losses during the two years would have been substantially higher.

For even a modest construction recovery to take place, at both the national and local levels, federal fiscal and monetary policies will need to be implemented that are not directionally incompatible as is presently the case. Currently, actual or anticipated fiscal policy is excessively stimulative, monetary policy excessively depressant. This pulling of the economy in opposite directions has, as would be expected, resulted in economic stagnation and very high interest rates.

More rational macro-economic policies are not expected to be implemented at the national level during fiscal 1982. Additionally, the support provided Colorado's construction industry by non-residential construction

and oil shale development during the past two years will depreciate significantly. Construction employment during the current period, therefore, will probably decline by an additional 2000 jobs.

For fiscal 1983, things look a little better. It is assumed that economic policies more directionally compatible (and therefore more conducive to economic recovery) will be passed by the Congress convening in January 1983. Such actions should help to bring a turn-around in construction activity in the 1983 fiscal year with positive growth rates being experienced for the first time since early 1980. Five hundred to 1000 new jobs are anticipated.

The Manufacturing Industry

Unlike most of the other major divisions where two or three factors are defining growth rate levels, a much larger number of factors would seem to be responsible for the lower growth rate being experienced by Manufacturing. Increasing levels of competition from both national and international sources, changing consumer demand, the problems in residential housing, falling productivity functions, high energy costs, a strong dollar, and a prolonged recessionary environment nationally would seem to be some of the major reasons for the 3 point growth rate drop experienced by Manufacturing. Growth rates during the next two fiscal years will probably drop even more. Rates of around one percent annually are anticipated.

Lumber and Wood Products, Furniture and Fixtures, Rubber and Plastic Products, Leather Products, Stone Clay and Glass Products, Primary Metals, and Fabricated Metal Products will probably remain flat or show slight to moderate declines during the period.

Machinery Except Electrical is a toss-up. It could go either way.

Growth should be concentrated in Electrical and Electronic Machinery and Equipment, Transportation Equipment, Instruments, Food and Kindred Products, and Printing and Publishing.

About 1500 new jobs should be generated in fiscal 1982 and another 2100 in fiscal 1983.

The Transportation and Public Utilities Industry

High energy costs, better than average productivity gains, and partial deregulation of the industry, continued to drop employment growth rates, particularly during the final quarter of 1981.

Deregulation will continue to cause employment adjustments in the air transportation sector. Cost structures that seemed reasonable under controlled market conditions have, in many instances, become excessive as competition for the consumer's dollar has accelerated.

The continuing application of those technologies being applied to communications is expected to moderately reduce the number of existing jobs in this sector.

Over the short-run, employment opportunities in the trucking sector look mixed. Sluggish demand and partial deregulation will probably continue to reduce new job opportunities. On the other hand, as deregulation accelerates, the number of smaller firms comprising the industry may rise, providing concomitant increases in employment opportunities.

A negative growth rate is forecast for fiscal 1982 as cost structures are further adjusted in response to increasing competition. More reasonable fuel prices, a moderately improved economy and costs more in line with the realities of the market should move this division back into the plus side in fiscal 1983. A loss of 600 jobs during the current fiscal year should be followed by a gain of some 1500 new jobs during the following fiscal year.

The Wholesale Trade Industry

Although unable to maintain the 1973-79 average, this division was still generating good growth rates during the past two years. Most of the new job opportunities were centered in the durable goods sector, primarily in the Machinery, Equipment, and Electrical Goods markets.

Soft demand from the construction and mining industries plus continuing problems in retail trade will probably moderate the number of new opportunities available during the current fiscal year. Around 1600 additional jobs are anticipated. Fiscal 1983 should be a little stronger. Consumer demand should pick up moderately, and the adjustments to lower construction and mining demand should be completed. Another 2400 new jobs should be available.

The Retail Trade Industry

Only two of the eight sectors comprising this major division were able to approximate their 1973-79 average employment gains during the 1980-81 period: Food Stores and Miscellaneous Retailers. All of the other major sectors either suffered substantially reduced rates of growth, or actual employment declines. Hardest hit by the two recessions occurring during the period, sluggish personal income gains and high interest rates were Auto Dealers, General Merchandisers, Apparel Stores and Furniture and Home Furnishings outlets.

Growth rates in this division are expected to deteriorate further during fiscal 1982. Continued high consumer credit costs, an increase in the personal savings rate, and the fear of layoff or reduced work schedules will slow consumer purchases and limit employment gains to about 2000 jobs during the period. This is substantially below the 8500 average experienced during the past eight years. The anticipated increases in disposable income due to the July 1 ten percent general tax cut will, for the most part, be offset by higher Social Security contributions, "bracket creep", and higher user fees imposed by all three levels of government.

As previously indicated, the current impasse between national fiscal and monetary policies is expected to be addressed by Congress during the early months of the 1983 fiscal year. As with most of the other

major divisions, these macro-economic corrections should have a positive impact on retail sales. For the year as a whole, therefore, about 3000 new jobs should be available to Colorado workers, with substantially higher levels anticipated during the final quarter of the period.

The Finance, Insurance and Real Estate Industry

Although not quite up to its six year average, this division was still generating moderately strong growth during the 1980-81 period. Softness in the Real Estate and Insurance Agent sectors was balanced somewhat by good gains in Banking and Security/Commodity Broker employment. But this industry will be facing a number of growth constraints during the next two years.

Continuing soft demand and price structures in the petroleum sector of the mining industry should reduce employment levels in the security and commodities sector of Finance, Insurance and Real Estate. The growth of additional banking facilities throughout the state is expected to slow substantially during the period with a corresponding drop in the number of new openings being generated. Growth rates in the Credit Agency sector are also expected to slow due to the continuing high cost of credit and some consolidations resulting from the Deregulation and Monetary Control Act of 1980. And, of course, the Real Estate sector is expected to offer few, if any, new job opportunities during the period.

This division's growth rate will probably drop to less than two percent during the current fiscal year, and move up rather modestly in fiscal 1983 to about a 2.5 percent level.

The Service Industry

Primarily because of the Health Service sector, and to a lesser extent the Educational and Legal Services sectors, this major division is usually less susceptible to major cyclical downturns than is the case for most of the other divisions already reviewed. Even with two recessionary periods, growth rates during the past two years were only moderately below the six year average for the industry.

But the recession currently being experienced both nationally and locally is becoming deeper and more protracted as we move further into 1982. It will, therefore, have obvious negative effects on services growth during the next two years. Additionally, demand elasticity changes taking place in portions of the industry will effect the growth in new job opportunities.

The Health Services pricing structure is fast reaching a point comparable to that already reached in the housing and energy sectors in terms of their effects on the elasticity of demand. As medical costs continue to rise, growth rates are being mitigated or actual declines in the demand for medical services are being experienced. This is clearly shown in those cases involving some type of co-insurance wherein the consumer is required to pick up a portion of the actual medical costs being incurred.

Spurred by high growth rates in the energy industry, the Personnel Supply Service sector experienced exceptional growth during the past two years. Given the forecasts for the Mining industry that were previously defined, this sector will probably level out or show actual employment declines during the current and following fiscal years. Other Business Service activities are forecast to follow the same trends experienced during the 1974-75 recession when substantial growth rate reductions took place.

Finally, budget constraints nationally are expected to negatively impact the short-term growth potentials of the Health, Education, Hotel/Motel, Legal and Social Services sector of this industry.

Growth rates should average about 3.5 percent during fiscal 1982, and then move up moderately to about 4.2 percent during the fiscal year commencing October 1, 1982.

OCCUPATIONAL EMPLOYMENT OUTLOOK

Approximately 24,000 new private nonagricultural wage and salary jobs will be generated during Fiscal Year 1983 in Colorado. This change in employment represents only one part of the demand for workers in occupations. Replacement of workers due to death, retirement, temporary leave from the labor force, or transfer to other occupations or to other geographic areas also creates job openings. In fact, it is estimated that national replacement needs resulting from deaths and retirements alone are usually double the number of openings due to growth. Additionally, despite the lack of specific statistical data, national research findings indicate that occupational transfers and temporary labor force separations are a larger source of job openings than employment growth, death, and retirements combined. Research further indicates that the number of occupational transfers varies inversely with the amount of training required in an occupation.

Current projection programs address growth, deaths, and retirements. Research is continuing on the best way to improve methods for gathering data on occupational transfers and temporary leaves from the labor force.

Currently, the most well-developed projection methodology is that which uses the Occupational Employment Statistics (OES) survey program, a federal-state cooperative project funded under CETA-IMJ (Title III, Section 312) by the ETA, with technical review by the BLS, and published by the CDET.

This program, through regular surveys of industry establishments in the state, generates staffing patterns within industry sectors and then aggregates them to a total occupational staffing pattern within the state.

The estimated distribution of major occupational categories in fiscal year 1983 in Colorado, and the U.S. reflects the following proportions and rank:

Nonagricultural wage and salary	Estimated Fiscal '83 Colorado	Rank	Estimated Fiscal '83 U.S.	Rank
All occupations	100.0%	--	100.0%	--
Professional, technical, and kindred	20.4%	1	17.6%	2
Clerical	20.2%	2	19.0%	1
Service Workers	15.1%	3	14.0%	3
Crafts	11.5%	4	13.5%	5
Operatives	11.0%	5	13.7%	4
Managers	9.3%	6	11.7%	6
Sales	6.9%	7	6.6%	7
Nonfarm Laborers	5.7%	8	4.0%	8

For the most part, rankings both nationally and locally tend to follow the same pattern. An important exception is the professional, technical and kindred category which ranks first in the local economy. Nationally, clerical occupations hold this position.

Another yardstick that can be used in determining career choices and/or implementation of training programs to meet employment demand is to look at those occupational categories showing the greatest growth. In this instance, the Colorado projections program lists approximately twenty detailed occupations, each of which will account for one thousand or more job openings in fiscal 1983:

Occupational title	Number of job openings
Sales workers	7000
Stenos, typists, secretaries	4000
Teachers	3000
Sales clerks	3000
Waiters	3000
General clerks, office	2000
Bookkeepers	2000
Cashiers	2000
Cooks, except private	2000
Engineering, science technicians	1000
Engineers	1000
Managers, store	1000
Health technologists and technicians	1000

Occupational title	Number of job openings
Truckdriving occupations	1000
Nursing assistant occupations	1000
Stock clerks, storekeepers	1000
Nurses and physician's assistants	1000
Accounting occupations	1000
Blue-collar-worker supervisors	1000

However, before career choices can be made, and training programs are implemented, the supply side of the occupational demand/supply equation must be evaluated. Total demand for jobs must be matched with the occupational skills of persons seeking jobs. If this is not accomplished, the job market could result in too many persons in occupations for which there is little demand, and too many jobs available for skills that are not represented in the labor force.

Determining occupational supply does not lend itself as easily to projection models as does the demand side, because supply is too fluid, flexible, and subject to change.

We know that supply comes from structured training programs such as public and private vocational schools, apprenticeship programs, federal employment and training programs, armed forces training, community and junior colleges, colleges and universities, and employer training programs.

We also know that the potential supply of workers for any occupation consists of persons currently employed in that field, plus graduates of programs specifically designed to train workers for such occupations, persons from training programs in related fields, or persons who possess the necessary qualifications but are either unemployed, not in the labor force, or are employed in other occupations. And finally, they may be persons who will immigrate.

Adequate analysis of supply is increaingly difficult, because 1) college graduates are motivated to enter their fields of specialization or related fields when seeking employment, depending on the demand, wages, and benefits; 2) many people take jobs which offer on-the-job training and which are unrelated to the training they completed; and 3) many workers possess entry-level skills for a multitude of jobs, such as receptionist, assembler, and retail clerk, for which no training was obtained.

One large source of information concerning unemployed persons is the Employment Service Automated Reporting System (ESARS). In FY 1978, more than 15 million people registered with Job Service Centers nationally seeking job-related services. Approximately 95% of these applicants were unemployed. In calendar year 1978, over 17 million persons were unemployed, implying that Job Service Centers register a substantial portion of labor supply.

Just as the demand projections do not encompass all demand, the available supply data from the ESARS program does not define the total supply. However, analysts in the Research and Development Section have designed a method of measurement using the available ESARS supply and job bank demand information for determining a workable analysis of the local labor market for short-term occupational supply and demand estimates. Output from the program (Quarterly Occupational Supply/Demand Outlook) indicates that, relative to the estimated demand expected, the following occupations will be in short supply during fiscal year 1983:

ESTIMATED OCCUPATIONS THAT WILL HAVE SIGNIFICANT OR HIGH UNDERSUPPLY RELATIVE TO ESTIMATED DEMAND

When using these occupations as guides for training programs or job search efforts, it should be recognized that occupational supply/demand imbalances are caused by many factors in addition to a shortage or redundancy of trained labor resources. The level and type of remuneration, job location, the hours to be worked, available transportation to and from the work site, and excessive turnover, are examples of factors in addition to the trained labor resource factor that can influence the degree of balance being achieved by the job match function for a particular occupation.

SPECIAL WORKER GROUPS IN THE LABOR FORCE

Education, training and experience are not always the keys to finding jobs in the labor market. The employment security agencies have traditionally been required, through legislation and public policy, to administer special services to groups of workers who often find barriers to meaningful, well-paid jobs, i.e., older workers, handicapped, females, youth, disadvantaged, and veterans.

Additional barriers to applicants seeking services in FY 1981, as a result of budget constraints within the agency, changed administrative policy for Job Service Centers (JSC's) during the last two quarters of FY 1981 statewide in the following manner:

- Budget constraints mandated the closing of some of the full functioning JSC's statewide.
- Budget constraints mandated the reduction of staff in the remaining offices statewide.

Other factors were the curtailment of program availability, and decreased program delivery as applicants seeking these services in some areas of the state were forced to travel greater distances to local JSC's.

Older Workers

Projections concerning this group point out that, by the year 2000, workers 45 years of age and over will comprise 40% of the total labor force, compared to the 1980 figure of 30%. During the past decade applicants 45 years of age and over who sought services through the employment service increased by 22%.

*In FY 1981, approximately 10.6% of all registered applicants were older workers. 7.7% of those placed were older workers. 12.8% of those counseled, 6.9% of those enrolled in training, 6.4% tested, 13.0% of job development contacts, 8.4% placed as a result of job development and 10.7% placed after counseling were older workers. Parity of services in only three areas were met: counseled; job development contacts; and placed after counseling.

The majority of these applicants represented white collar workers, and most were placed in jobs in the professional/technical/managerial, clerical and services occupations with an hourly wage of $4.23.

Considering the steady increase of older workers represented in the labor force, it would seem that 10.6% is a low proportion seeking employment-related services. This disparity may be due to:

1) A lack of emphasis in older worker programs or

2) Contacts in industry that this group has established by virtue of their being in the working world for a long time.

Handicapped

National and state projections for the 80's, for the handicapped population seeking services in local JSC's has had to be completely revised due to the depressed economy and curtailment of the provisions and enforcement of the Vocational Rehabilitation Act of 1973, as amended, Sections 503 and 504.

*In FY 1981, approximately 3.4% of all CDET applicants were handicapped. Job Service Centers have always provided special services to this group of applicants, and, during FY 1981, equity of service was met in all of the following activities with the exception of total individuals placed:

Services	Ratio Handicapped/Total FY 1981
Applicants available	3.4
Counseled	11.1
Placed after counseling	10.7
Tested	3.9
Enrolled in training	5.7
Job development contacts	5.3
Placed as a result of job development	5.3
Total individuals placed	3.2

The average hourly wage for handicapped individuals placed was $4.31 as compared to the average of $4.26 for total applicants.

Women

In 1950 nationally, 33.9% of women were in the labor force in comparison to 86.4% men. 1981 statistics show the participation rate for women has increased to 52.2% and declined for men to 77.5% during these three decades.

Nationally, unemployment rates are generally higher for women than for men. 1981 data shows 7.9% women were unemployed in comparison to 7.4% men.

However, women working full time still average about six dollars for every ten earned by men, even though they have made inroads into professional/technical jobs with higher status and earnings. This disparity has been approximately the same from 1967 through 1980 on an annual average.

Women in Colorado rank higher statistically than the national experience. Estimated labor force participation for women in Colorado for 1981 is 62.5% as compared with 75.1% men. Estimated unemployment rates for women in 1981 is 6.0% and 5.0% for men.

*In FY 1981, approximately 41.4% of all registered applicants were women. Services in three important areas were below parity: Placed result of job development; placed after counseling; and total placed:

Services	Ratio Women/Total FY 1981
All applicants	41.4
Placed result of job development	36.6
Enrolled in training	45.5
Tested	55.7
Counseled	46.8
Placed after counseling	39.9
Total placed	35.9

The average hourly wage for women placed was $3.81 as compared to $4.26 for total applicants.

Youth

Teenaged youth (16 through 19 years of age) are estimated to represent the same 7.6% of the population in 1983 as in 1982.

It is estimated that teenagers comprised approximately 8% of the Colorado labor force in 1981. The estimated unemployment rate for 16 through 19 years olds was 14.7%, compared to a 5.5% rate for the total labor force.

Two major causes of teenage unemployment are low job attachment and the slow absorption of new entrants into the labor market. Availability of entry-level jobs at minimum wage is usually good, and usually meets the needs of those youth who seek temporary employment.

In Colorado, an annual program is again being launched through the Governor's office in cooperation with the employment service and private industry to employ youth during the summer of 1982.

*Approximately 26% of all applicants registered in FY 1981 were under 22 years of age. Nineteen percent and 13% of those placed were 16 through 19, and 20 through 21 years of age, respectively. Sixty-nine percent of those enrolled in training were youth 16 through 19.

Occupational skills of teenagers were centered in the clerical, services, structural, and miscellaneous occupations.

The average wage per hour rate for 16 through 19 year old applicants was $3.86. This indicates increased success in placing youth in jobs above minimum scales.

This overview indicates that the Colorado job service is successfully attempting to meet the employment-related needs of youth.

Economically Disadvantaged

Approximately 9.4% of the Colorado population will be in poverty in FY 1983, and about 41% of those economically disadvantaged will be minorities (Hispanic, Black, Indian, Eskimo, Aleutian, Asian and Pacific Islander). The Colorado job service applicant file in FY 1981 posted 25% of the total as Economically Disadvantaged. The employment service obviously draws a greater proportion of disadvantaged applicants as compared to their proportion in the total population.

*In evaluating equity of service to disadvantaged registrants, the following statistics indicate that JSC's served this applicant group well with the exception of testing services:

Service	Ratio Economically Disadvantaged/Total FY 1981
Total	25.0
Placed in employment	27.4
Placed result of job development	36.5
Enrolled in training	68.9
Tested	20.1
Counseled	51.1
Placed after counseling	53.8

The average wage per hour for economically disadvantaged applicants was $4.04 as compared with $4.26 for total applicants.

The single most important area of service requiring improvements is to find better paying jobs for all applicants, as well as for the disadvantaged.

Efforts to train disadvantaged applicants in occupations that offer upward mobility would be one significant measure to improve the economic status of this population group.

Summary

In summary, budget constraints that mandated the closing of some of the full functioning offices statewide during the last two quarters of FY 1981, the reduction of staff in the remaining offices, the curtailment of program availability, program delivery and program participation by applicants seeking these services in local JSC's were not adversely affected.

Data noted that local JSC staff apparently met the challenge of these adverse conditions during the last two quarters of FY 1981 and presented services to applicants seeking these services comparable to services presented in FY 1980.

ECONOMIC OVERVIEW
OF THE
DENVER-BOULDER LMA

The Denver-Boulder LMA is comprised of eight counties: Adams, Arapahoe, Boulder, Denver, Jefferson, Clear Creek, Douglas, and Gilpin. These eight counties also represent Colorado Planning Region 3 and Vocational Education Planning Region 3.

Population

- the population estimate of 1,718,656 for 1983 represents 56% of the total state population. 23% of the population is estimated to be minorities, the same as the state rate.
- the female population of 51% of total matches that of the state.
- the overall increase in population from 1970 to 1980 was 30%, the same rate as in the entire state. However, Douglas County experienced the greatest growth, approximately 200%, Arapahoe ranked second at 81%, and Denver trailed all counties, posting a five percent decrease.

Labor force

- the FY 1983 labor force estimate of 919,100 persons represents approximately 60% of the total state labor force.
- because this area represents more than half the population and labor force, its industry and population representation significantly influences the state ratios.
- the labor force growth between 1970 and 1980 was 60%, or double that of the population increase.
- Denver-Boulder LMA nonagricultural employment represents approximately 64% of the state's total nonagricultural employment.
- the largest industry sectors in this area are trade, services, government, and manufacturing. Employment growth between 1982 and 1987 is projected at approximately 2.3% per annum for both the Denver-Boulder LMA and the state.

Nonagricultural wage and salary employment grew by approximately 3.0% in 1981. Employment growth in 1982 is expected to average about 1.5%, as this area's economy responds to the national legislative and presidential political and economic moves and counter-moves.

Employment service activities

- during FY 1981, 138,684 applicants were available for employment-related services in the Denver-Boulder LMA.
- special applicant groups as a percent of total applicants were:

All applicants	100%
Youth (under 22)	25%
Older worker (45 and over)	11%
Female	39%
Veteran	18%
Disadvantaged	23%
Handicapped	4%
Minorities	31%

- services to applicants posted the following percentages (as percents of total applicants):

	Placed	Counseled
All applicants	100.0%	100.0%
Youth (under 22)	33.6%	16.0%
Older worker (45 and over)	8.2%	12.5%
Female	34.1%	44.7%
Veteran	21.0%	24.5%
Disadvantaged	28.9%	57.3%
Handicapped	4.0%	10.4%
Minorities	33.7%	45.6%

- occupational skills of Denver-Boulder LMA applicants were:

White collar	35.2%
Services	12.6%
Farming	1.5%
Blue collar	50.7%

- of those job openings received and filled, the occupational categories were:

	Received	Filled
White collar	28.5%	18.0%
Services	18.5%	15.6%
Farming	6.2%	7.6%
Blue collar	46.7%	58.7%

The employment service activities during the period October 1980-September 1981 (FY 1981) in the Denver-Boulder metropolitan area posted a 34.6% increase in registered applicants, an increase of 3.4% in placements, a 3.8% decrease in the number of job openings received, and an increase of 17.0% in registered claimants. All of these events further substantiate the signs of an economic downturn.

Colorado Springs SMSA

- Economic Overview 121

- 1980 Census and 1983 Estimate of Population SMSA and El Paso County 121-123

- Estimated Manpower Data Summary, FY 1983 125

- Estimated Employment Status by Race and Sex, 1981 126

- Projected Growth in Major Industry Divisions, 1982-1987 127

- Selected Individual Services for ES Applicants by Demographic Characteristics, FY 1981 128

  All Applicants
  All Veterans
  Economically Disadvantaged
  Handicapped

- Demographic Characteristics of ES Applicants by Occupational Category, FY 1981 132

ECONOMIC OVERVIEW
OF THE
COLORADO SPRINGS SMSA

Population

- estimated 1983 population is about 335,126.

- 20% of the population is comprised of minorities, and females make up 49% of total population.

Labor Force

- unemployment in this area in FY 1983 will approximate 6.2%, somewhat higher than the 5.7% for the state.

- the participation rate for those 16 years old and over is expected to be about 57.7%. This is considerably lower than the state's participation rate.

Industry Employment

- the three largest industry employment sectors in this area are trade, services, and government, with manufacturing running fourth.

Employment Service Activities

- in FY 1981, 36,504 applicants were available for employment-related services.

- representation of target groups posted the following:

Female	45.3%
Veteran	24.2%
Economically Disadvantaged	22.3%
Handicapped	3.8%
Minority	20.2%
Youth (under 22)	26.0%
Older Worker (45 & over)	10.2%
State Claimant	35.0%

- approximately 16.1% of all applicants were placed.

- occupational skills of applicants showed the following:

White Collar	38%
Blue Collar	47%
Services	13%
Farm	2%

- job openings received and filled by occupational categories posted the following proportions:

	Received	Filled
White Collar	26.2%	20.5%
Blue Collar	49.6%	56.5%
Services	19.7%	17.5%
Farm	4.5%	5.5%
Total	100.0%	100.0%

The occupational skills do not match the skills demanded by employers. It would seem feasible for employment service representatives to develop jobs for applicants in accordance with their skills, inasmuch as only 16.1% of the applicants were placed.

    Economically Disadvantaged
    Migrants
    Handicapped

- Demographic Characteristics of ES Applicants by Occupational Category, FY 1981 152

ECONOMIC OVERVIEW
OF THE
PUEBLO SMSA

This county has not been a high-growth area, despite the fact that it is located along the highly industrialized Front Range.

Population

- growth from 1970 to 1980 was low, ranking thirty-ninth in the state and posting a six percent gain. The estimated 1983 population is 132,984. 51% of the population will be female, and approximately 48% minorities.

Labor force

- FY 1983 labor force of 50,200 will post an unemployment rate of 9.7% and a participation rate of 50.6%

Industry employment

- the three leading industry sectors (services, trade, and manufacturing) employ about 80% of total private sector nonagricultural employment. (The leading employer in Pueblo County is the CF&I Steel Corporation.) Projections to 1987 indicate annual employment decreases of approximately 0.4 %.

Employment service activities

- approximately 19,688 applicants registered for employment-related services in FY 1981.

- special applicant groups as a percent of total applicants, and the services they received, were:

	Applicants Registered	Placed	Counseled
TOTAL	18,688	2,679	1,311
Youth (Under 22)	30.8%	35.4%	27.8%
Older Worker (45 and over)	10.9%	8.3%	14.4%
Female	44.8%	38.2%	61.4%
Veteran	16.6%	20.5%	16.9%
Disadvantaged	28.1%	37.0%	32.6%
Handicapped	3.9%	4.1%	8.2%
State Claimant	29.4%	15.7%	16.0%
Minority	43.6%	50.0%	33.9%

- occupational skills of applicants and occupational demand for job openings received and filled in this area in FY 1981 were:

	All Applicants	Job Openings Received	Job Openings Filled
White Collar	36.7%	32.1%	28.6%
Services	18.7%	17.7%	15.3%
Farming	1.7%	13.6%	16.2%
Blue Collar	42.9%	36.6%	39.9%

Only 14.3% of all applicants were placed, despite an 81.7% fill rate of openings filled to openings received. This would indicate that the Job Service Center must do more job development to penetrate those employers not using the Job Service to list their openings, and to develop jobs that will match applicant skills.

- Demographic Characteristics of ES Applicants by Occupational Category, FY 1981 172

ECONOMIC OVERVIEW
OF THE
FORT COLLINS SMSA

Population

- estimated 1983 population is expected to be 157,456.

- eleven percent of the population will be comprised of minorities, and females will make up fifty percent of total population.

Labor Force

- unemployment in this area in FY 1983 will approximate 5.7%, the same rate expected for the state as a whole.

- the participation rate for those 16 years old and over is expected to be about 67.8%, which is slightly higher than the state's participation rate.

Industry Employment

- the three largest industry employment sectors in this area are government, trade, and manufacturing. Projected growth to 1987 will approximate 3.2% per year, with services and manufacturing leading.

Employment Service Activities

- in FY 1981, approximately 17,806 applicants were available for employment-related services.

- representation of target groups posted the following:

Female	41.9%
Veteran	16.3%
Economically Disadvantaged	22.5%
Handicapped	3.7%
State Claimant	35.2%
Minority	10.9%
Youth (under 22)	24.7%
Older Worker (45 & Over)	9.1%

- approximately 19% of all applicants were placed.

- occupational skills of applicants and of job openings received and filled posted the following proportions:

	All Applicants	Job Openings Received	Job Openings Filled
White Collar	38.1%	23.3%	20.4%
Services	13.1%	20.5%	18.3%
Farming	4.0%	11.0%	12.2%
Blue Collar	44.8%	45.2%	49.1%

The occupational skills of applicants do not match the skills demanded by employers. It would seem reasonable for Job Service office staff to develop jobs for applicants in accordance with their skills, inasmuch as only 19% of the applicants were placed.

- Projected Growth in Major Industry Divisions, 1982-1987 186

- Selected Individual Services for ES Applicants by Demographic Characteristics, FY 1981 187

  All Applicants
  All Veterans
  Economically Disadvantaged
  Migrants
  Handicapped

- Demographic Characteristics of ES Applicants by Occupational Category, FY 1981 192

ECONOMIC OVERVIEW
OF THE
GREELEY SMSA

Population

- estimated 1983 population is about 130,308.

- 28% of the population is comprised of minorities, and females make up 51% of total population.

Labor Force

- unemployment in this area in FY 1983 will approximate 6.0%, slightly higher than the expected 5.7% rate for the state.

- the participation rate for those 16 years old and over is expected to be about 64.4%.

Industry Employment

- the four largest industry employment sectors in this area are government, trade, manufacturing, and services. Growth during the period 1982-1987 will average approximately 1.3 percent per year, significantly less than the 2.4 percent expected for the state.

Employment Service Activities

- in FY 1981, approximately 13,294 applicants were available for employment-related services.

- representation of target groups posted the following:

Minority	38.6%
Female	41.0%
Veteran	16.6%
Disadvantaged	38.1%
Handicapped	4.7%
State Claimant	23.2%
Migrant	4.8%
Youth (under 22)	25.4%

- approximately 20.3% of all applicants were placed.

- equity of service relative to applicant proportions was met for some applicant groups; however, equity in placement for veterans and handicapped was not met. It would seem appropriate for management to determine why these special applicant groups were not being placed in proportion to their representation, and to implement policies to rectify these inequities.

- occupational skills of applicants and of job openings received and filled showed the following:

	All Applicants	Job Openings Received	Job Openings Filled
White Collar	30.3%	24.7%	22.0%
Services	12.9%	19.2%	17.7%
Farming	4.4%	16.8%	18.4%
Blue Collar	52.4%	39.3%	41.9%

The occupational skills of applicants do not match the skills demanded by employers. It would seem desirable for Job Service Center staff to develop jobs for applicants in accordance with their skills, inasmuch as only 20.3% of the applicants were placed.

- 1980 Census and Estimated 1983 Population 203

- Estimated Labor Force and Participation Rates, FY 1983 204

- Estimated Employment Status by Race and Sex, 1981 205

- Projected Growth in Major Industry Divisions, 1982-1987 206

- Selected Individual Services for ES Applicants by Demographic Characteristics, FY 1981 207

  All Applicants
  All Veterans
  Economically Disadvantaged
  Migrants
  Handicapped

- Demographic Characteristics of ES Applicants by Occupational Category, FY 1981 212

ECONOMIC OVERVIEW
OF
MESA COUNTY*

Population

- estimated 1983 population is about 86,050

- eleven percent of the population will be comprised of minorities, and females will make up fifty-one percent of total population.

Labor Force

- unemployment in this area in FY 1983 will approximate 5.4%, slightly lower than the 5.7% estimate for the state.

- the participation rate for those 16 years old and over is expected to be about 66.2%, about the same as for the state as a whole.

Industry Employment

- the three largest industry employment sectors in this area are trade, service, and government. Projected growth to 1987 will approximate 3.8 percent per year, with mining and services leading.

Employment Service Activities

- in FY 1981, approximately 10,903 applicants were available for employment-related services.

- representation of target groups posted the following:

Older Workers (45 & over)	12.8%
Female	39.1%
Veteran	21.4%
Economically disadvantaged	24.0%
Handicapped	2.6%
State Claimant	23.1%
Minority	10.0%
Youth (under 22)	23.7%

* Primarily Grand Junction Local Job Service Center

- approximately 23.6% of all applicants were placed.

- equity of services relative to applicant proportions was met for a few applicant groups placed in employment. However, the veteran, older worker (45 and over), handicapped, and state claimant placed in employment were below parity. It would seem incumbent upon management to determine why these special applicant groups were not being placed in proportion to their representation.

- occupational skills of applicants and of job openings received and filled posted the following proportions:

	All Applicants	Job Openings Received	Job Openings Filled
White Collar	25.3%	29.0%	26.0%
Services	7.8%	17.1%	16.0%
Farming	1.3%	5.4%	5.3%
Blue Collar	65.6%	48.5%	52.7%

The occupational skills of applicants do not match the skills demanded by employers. It would seem reasonable for Job Service office staff to develop jobs for applicants in accordance with their skills, inasmuch as only 23.6% of the applicants were placed.

TECHNICAL NOTES

EMPLOYED PART-TIME FOR ECONOMIC REASONS

An analysis of those employed part-time for economic reasons nationally indicates that the proportion increases during times of slow economic growth and recessionary years and decreases during expansionary periods. Inasmuch as Fiscal Year 1983 is estimated to be a year of slow growth after a shaky, soft period in 1982, it was estimated by the Colorado analyst that approximately 8.8% of total employed persons would be employed part-time for economic reasons. Racial/ethnic ratios were based on the racial/ethnic ratios of the employed-part-time Job Service applicants.

LONG-TERM UNEMPLOYED

An average ratio of the long-term unemployed to total unemployment for 1969-1979 for the United States was applied to the estimated total unemployment in Colorado. Racial/ethnic ratios were determined by using the racial/ethnic ratios of the unemployed Job Service applicants.

ESTIMATED UNEMPLOYED VETERANS NEEDING MANPOWER SERVICES

The numbers of unemployed total and Vietnam-Era veterans needing manpower services reflects the numbers of veterans using the Job Service during a twelve-month period. These numbers do not reflect the average number of veterans who are unemployed in the labor force.

DISPLACED FEMALE HOMEMAKERS

This estimate is based on the following assumptions:

1. In 1975, the Survey of Income and Education estimated that 3.7% of females aged 16 years and over were displaced homemakers in Colorado and its metropolitan areas.

2. Since 1975, females have continued to enter and remain in the labor force in greater numbers than in the previous decade.

3. Females are outliving males by approximately seven years, thereby forcing a larger number of older nonworking females into the labor market.

4. The cutting of social welfare programs during the next eighteen months due to the current political and economic environment will force additional women into the labor force.

Therefore, the number of displaced female homemakers in Colorado and the metropolitan areas is estimated at 4.5% for white nonhispanics, at 4.6% for the total, and 5.0% for minorities.

PERSONS BELOW THE POVERTY LINE

These estimates were made from the LBL updating model, which includes the following steps:

1. Tabulate 1970 Census and 1979 Current Population Statistics (CPS) data for the region:

	1970 Census (State)	1970 CPS (Region)	1979 CPS (Region)
Above poverty	78985	955178	941451
Below poverty	29863	198909	91746
Total	108848	1154087	1033197

2. Convert to percents:

Above poverty	72.56	82.76	91.12
Below poverty	27.44	17.24	8.88
	100.00	100.00	100.00

3. Multiply 1970 Census figures by the 1979-1970 CPS ratios:

$$91.12/82.76 \times 7256 = 7989$$
$$8.88/17.24 \times 2744 = 1413$$
$$9402$$

4. Normalize percents to sum up to 100.0%:

$$7989/7402 = 84.97 \text{ above poverty}$$
$$1413/9402 = 15.03 \text{ below poverty}$$

15.03% would be the new poverty ratio to apply to total population. For Colorado, the ratio is approximately 9.4%.

5. Ratios for racial/ethnic groups are based on racial/ethnic ratios in the Job Service applicant file.

WELFARE RECIPIENTS

Used 1979 welfare recipient data from the Department of Health and Human Services for the State of Colorado and counties. These figures were divided by the 1979 estimated population to determine the proportions of welfare recipients; these ratios were applied to the estimated population, e.g.:

1. $\frac{\text{1979 welfare recipients}}{\text{1979 Colorado population}} \quad \frac{79354}{2731000} = .02906$

2. 1982 estimated State population X .02906, i.e., 3092310 X .02906 = 88030 (number of welfare recipients in State, 1982)

To determine the county totals of welfare recipients:

$$\frac{\text{1979 county welfare recipients}}{\text{1979 State welfare recipients}} \times \text{1980 estimated State welfare recipients}$$

For example, for Adams County:

$$\frac{7870}{79354} \times 88030 = 8729$$

TOTAL NUMBERS OF INDIVIDUALS UNEMPLOYED DURING THE YEAR

Utilizing national data from Employment and Earnings, determined the ratio of total unemployed to average number of unemployed for the years 1969-1978, e.g.,

$$\text{TOTAL UNEMPLOYED } \frac{16928200}{541530} = .031260$$

This ratio was multiplied by the estimated 1982 average unemployed during the year, e.g., 51410 X .031260 = 160708.

THE MAJOR CAVEAT IN THESE ESTIMATING PROCEDURES IS THAT THE ASSUMPTIONS OF CHANGE ARE PREDICATED ON NATIONAL CHANGES WHICH ARE EXTENDED TO LOCAL AREAS.

HOWEVER, THE ANALYSTS FEEL CONFIDENT THAT THE ESTIMATES ARE RELATIVELY MORE REFLECTIVE OF THE ECONOMY THAN IS THE 1970 CENSUS FOR 1983 PLANNING.

ELIGIBLE LABOR SURPLUS AREAS FOR BIDDING ON FEDERAL CONTRACTS

BACKGROUND

Employers located in eligible labor surplus areas, as determined by the Department of Labor, and who meet other criteria, are entitled to preference in bidding on Federal procurement contracts.

The purpose of the labor surplus area procurement preference is to help guide a portion of the government's procurement dollars into those areas where people are in most severe economic need, e.g., areas with the highest unemployment.

The concept of targeting Federal procurement into areas of high unemployment dates back to the early 1950's. There was concern among government officials at the time that high unemployment rates and low utilization of plant and equipment in some areas would lead to erosion of the mobilization base and adversely affect production during the Korean Conflict. There was also concern that the cost of constructing new plans and relocating workers would cause an unnecessary drain on resources.

The Office of Defense Mobilization studied this problem and in February 1952 issued Defense Manpower Policy Number Four (DMP-4), implementing the idea of targeting Federal procurements to labor surplus areas. The program eventually became the responsibility of the Federal Preparedness Agency within the General Services Administration.

The labor surplus area program was largely unsuccessful in producing contract set-asides to employers in such areas because the program lacked a statutory base. This was changed in August 1977 with the enactment of Public Law 95-89 which amended the Small Business Act. Public Law 95-89 authorizes Federal agencies to "set-aside" contracts for competition among firms which agree to perform a substantial portion of the production of the contract in labor surplus areas. Contracts may be set-aside when an agency determines that offers will likely be obtained from a large enough number of eligible firms to permit the awards to be made at reasonable prices.

During the Urban and Regional Policy Group's review of Federal programs in 1977-78, the labor surplus area program was identified as one which had potential for providing relief for distressed areas. In March 1978, the General Services Administration was directed to work with each Federal agency to set targets for labor surplus area contracts, monitor agency performance, and report to the President every six months on the progress of each agency. These principles were contained in Executive Order 12073 which was signed on August 16, 1978.

In addition, Executive Order 12073 assigned to the Department of Labor the responsibility for classifying labor surplus areas. This was a continuation of the Labor Department's responsibilities since the inception of the program under DMP-4 in the early 1950's. The Department also has responsibility for classifying such areas under Executive Order 10582 which implements the Buy American Act.

CLASSIFICATION CRITERIA

Under the Department of Labor's classification procedures, an area is classified as a labor surplus area if the unemployment rate is at least 1.20 times the national unemployment rate during the previous two calendar years.

The procedures also provide for the classification on the basis of exceptional circumstances. Under these procedures, if an area does not meet the criteria necessary for classification as a labor surplus area, the criteria can be waived and the area classified when there has been a sudden rise in the unemployment in the area (other than seasonal or short term) that is not reflected in the area's data for the reference period. Such situations can occur as a result of natural disasters, plant closings of major employers, etc. which have a substantial impact on the area's employment and unemployment. In situations where such exceptional circumstances occur, the area can be classified as a labor surplus area upon petition from the appropriate State employment security agency. The addresses of the State employment security agencies are provided on the inside back cover.

Labor surplus areas are classified on the basis of civil jurisdictions, i.e., counties or county equivalents, as well as all cities with a population of at least 50,000. In four states (Michigan, New Jersey, New York and Pennsylvania), townships of 50,000 or more population are also eligible for classification as labor surplus areas. In New England, the labor surplus area classifications for Maine, New Hampshire, and Vermont are based on county data while in Connecticut, Massachusetts and Rhode Island, where counties have very limited or no government function, the classifications use towns as county equivalents. By classifying labor surplus areas in this way, i.e., in terms of civil jurisdictions rather than labor market areas, funds can be directed to specific localities with high unemployment rather than to all jurisdictions in a given metropolitan area, not all of which may suffer from the same degree of unemployment.

The eligibility status of labor surplus areas is determined annually under the classification procedures. The annual listings are effective each June 1 and remain in effect for the following 12 months.

The reference period used in making the classifications is an average of the previous two calendar years. By using an average of 24 months of data, contracts can be targeted in areas experiencing high structural unemployment.

The two-year reference period used in classifying the current list of labor surplus areas was January 1979 through December 1980. The national average unemployment rate during this reference period was 6.6 percent. Areas are included in the annual listing if their average unemployment rate during the reference period was 7.9 percent or more (i.e., 1.20 times the national rate). The present list of labor surplus areas will remain in effect through May 31, 1982.

LABOR SUPPLY CLASSIFICATIONS AND SUMMARY LABOR FORCE DATA FOR MAJOR AND OTHER LABOR AREAS, SECOND QUARTER 1981

LABOR SUPPLY CATEGORIES

Each quarter the Department of Labor classifies almost 300 labor market areas (including 150 major employment centers) into one of the six labor supply categories shown below.

Labor Supply Category	Description	Unemployment Rate 1/
Group A	Critical shortage of labor	Less than 1.5%
Group B	Serious shortage of labor	1.5 to 2.9%
Group C	Moderate shortage of labor	3.0 to 5.9%
Group D	Moderate surplus of labor	6.0 to 8.9%
Group E	Serious surplus of labor	9.0 to 11.9%
Group F	Critical surplus of labor	12.0% or more

1/ Ratio of unemployment to area's total labor force.

SOURCE: Area Trends in Employment and Unemployment
USDOL, ETA, January 1982

BACKGROUND

The categories used in classifying major labor areas according to the adequacy of supply of labor represent a continuation of a system which has been in operation for over 25 years. Although modifications have been made in the system from time to time, the present labor supply categories as indicated above are basically unchanged since May 1955.

The labor supply classifications provided cover the second quarter of 1981. These classifications are based upon the average labor force data for the months of April, May and June 1981.

LABOR MARKET AREAS

Unlike the classification of labor surplus areas which are done on the basis of civil jurisdictions, the labor supply classifications are done on a labor market area basis.

A "labor market area" means a geographic area in which there is a concentration of economic activity of labor demand and in which workers can readily change jobs without changing their place of residence. Labor areas usually include one or more entire counties, except in New England where towns are considered the major geographical units.

The largest labor market areas are referred to as major labor areas. Major labor areas usually have at least one central city with a population of 50,000 or more. In most instances boundaries of major labor areas coincide with those of the Standard Metropolitan Statistical Areas.

Geographical boundaries of all classified areas are listed in the Employment and Training Administration publication entitled Directory of Important Labor Areas. Requests for copies of the Directory should be addressed to the Employment and Training Administration (TPPL), Room 9304, 601 - D Street, N.W., Washington, D.C. 20213.

COMMONLY USED TERMS, ACRONYMS, AND ABBREVIATIONS

AFDC - Aid to Families with Dependent Children

All other nonag - nonagricultural self-employed, unpaid, family, and domestic workers.

Applicants available - all applicants available at end of period (i.e. all new, new partial, and renewal applicants.

BLS - Bureau of Labor Statistics

CDET - Colorado Division of Employment and Training

CETA - Comprehensive Employment and Training Act

Civilian labor force - all civilian uninstitutionalized individuals, 16 years of age or older, employed or unemployed, by place of residence.

Civilian labor force participation rate - the ratio of the civilian labor force to the civilian uninstitutionalized population. Participation rates are usually published by sex-age groups and often are cross-classified by other demographic characteristics.

CPS - Current Population Survey

Continued weeks claimed - the sum of weeks claimed for partial or total unemployment under the unemployment compensation program.

Counseling interview - a face-to-face interview in which an employment counselor or employment counselor trainee (1) helps an applicant resolve problems of occupational choice or change or job adjustment and (2) obtains and records on the application and/or other appropriate applicant records one or more of the following: (a) a summary statement describing the counseling problem; (b) additional information contributing to a better definition of the problem or its solution; (c) a statement of an occupational plan or recommendation for the solution of the problem; and (d) when pertinent, a statement elicited in the course of follow-up concerning progress in carrying out the counseling plan and any further services needed.

Deregistration - denotes that a WIN registrant is being separated from the program for one of the following reasons: (1) employed after registration, off AFDC; (2) employed volunteer, not off AFDC; (3) applicant not eligible for AFDC; (4) applicant exempt from registration for work; (5) applicant sanctioned (removed for refusal to participate in program without good cause); (6) applicant off AFDC for non-WIN-related reasons such as death, moving, etc.

DOL/ETA - Department of Labor, Employment and Training Administration

DOT - Dictionary of Occupational Titles

Employed - those individuals, 16 years old or older, who did any work at all during the monthly survey week; includes full-time, part-time, and temporary workers. Individuals are also counted as employed if they have jobs but are temporarily absent from work.

Executive order - a formal document issued by the President of the United States (or in Colorado, the governor) which has the force of law. Executive orders are compiled in Title 3 of the Code of Federal Regulations.

Filled opening - a job opening for which an applicant referred by a local office has been hired by an employer and has entered the job.

HEW - the Department of Health, Education, and Welfare (now split into the Department of Health and Human Services and the Department of Education).

Individuals placed - initial referrals, hirings, and entrance into jobs by applicants during a fiscal year. These activities together comprise "placement transactions".

Initial claim - an application for a determination of eligibility for benefits which certifies the beginning date (or the continuance into a new benefit year) of a period of unemployment.

Job Development contact - the process of soliciting a public or private employer's order for a specific applicant for whom the local office has no suitable opening currently on file.

LMA - Labor market area

New applicant - a person filing an application card (Form 511A) for whom a local Job Service Center has no previously-prepared application card or whose previous application has become obsolete.

Nonagricultural (nonag) wage and salary - refers to nonagricultural-establishment employment.

Not in labor force - includes all civilians 16 years old and over who are not classified as employed or unemployed.

Obtained employment - employment not meeting the definition of "placement" (q.v.). This term is applied to WIN registrants only.

Placement - the hiring by an employer of an individual referred by a Job Service Center for a job or an interview, provided the Job Service completed all of the following steps: (1) made prior arrangements with the employer for the referral of one or more individuals; (2) referred an individual who had not been specifically designated by the employer for referral; (3) verified from a reliable source (preferably the employer) that the individual has entered on the job; and (4) prepared a job order form prior to referral and recorded the placement on the appropriate forms.

Referral - the act of determining that an applicant is qualified for a job opening and arranging an interview for the applicant with the employer.

Renewal - the transfer of an applicant from the inactive file to active status; that is, he/she is again considered to be available for referral to job openings or employability-development services.

SIC - standard industrial classification

SMSA - standard metropolitan statistical area

Testing - administering a test (standardized means of measuring an individual's possession of, interest in, or ability to acquire job skills or knowledge) to an applicant.

Unemployed - those individuals 16 years of age or older without a job who are available for work and actively seeking work.

WIN - Work Incentive Program
